NANOSCIENCE

YONEX Nanoscience achieves the quickest of racquet work two ways-- first, by providing sensitive control of how racquet materials perform at the level of a thousand millionth of a particle unit, and second by reducing the amount of racquet material the shaft needs, for the ideal super-thin/high-strength ratio.

WEIGHT/ GRIP SIZE	4U(80.0-84.9g)/G4 3U(85.0-89.9g)/G3,4,5

Made in Japan

Smash with more speed!
The high-performance graphite and gForce Ti hybrid construction create a head-weighted effect that gives more smash speed. The pared-corner construction of Armortec racquets is a unique YONEX structural feature that makes this series lightweight, controllable and highly manoeuvrable.

Colour: Yellow / Black 10mm LONG

ARMORTEC 300 NEW COLOUR

- Power Armor System
- C.S. CAP
- ISOMETRIC
- Built-in T-Joint

FLEX	Medium

--	---	--	----------------

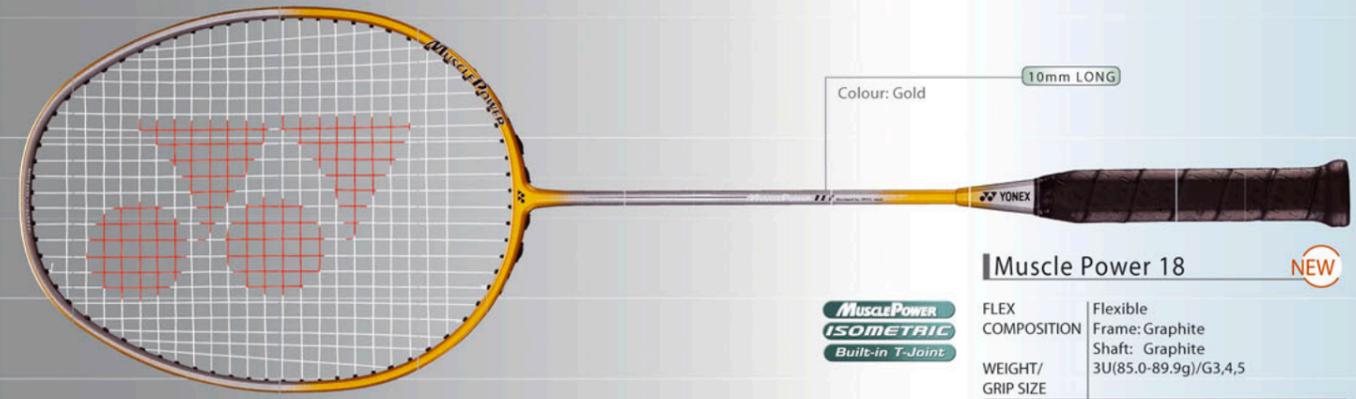

Total frame and string unity maximize speed and power!
The total frame and string unity of the Muscle Power frame keeps equal tension all across the stringbed. The construction eliminates the possibility of any area in the stringbed having loose tension, giving players who rely on speed for victory a mainstay racquet with maximum face stability for great speed and power.
